At Timber Products Company, we manufacture most of our softwood veneer in our own facilities, using trees grown and harvested on our own timberlands. We operate two dedicated softwood plywood plants in Oregon, and have invested in the technology necessary to manufacture our products with the greatest possible efficiency. Our state-of-the-art sanders and specialty glues allow us to fabricate panels for a wide range of performance requirements. In fact, we can even engineer panels to meet the unique and specific needs of individual customers – including panels up to five feet wide, ten feet long and two inches thick. And as a fully integrated company, we control the production, the costs and the quality from start to finish.
