

CLEARING THE AIR

Know the Facts About Hardwood Plywood Emissions

A BREATH OF FRESH AIR

For nearly 100 years, Timber Products Company has pioneered hardwood plywood manufacturing. Today, all of our GreenT™ hardwood plywood is environmentally certified and meets the strictest emission requirements in North America.

CARB- AND LEED®-COMPLIANT

Our award-winning GreenT™ products are a testament to our environmental stewardship and leadership.

- Engineered with innovative EcoBind Resin
- LEED®-Compliant
- CARB-Compliant
- SFI® or FSC® Chain-of-Custody certified upon request

Our commitment to excellence allows Timber Products Company to offer unequaled product quality and the industry's best service. From our responsibly managed timberlands to finished products, we are a tremendous resource to our customers and a steward of the environment.

HARDWOOD PLYWOOD

SAFE, LOW-EMITTING PANEL PRODUCTS

Our hardwood plywood products have emission levels that approach the low levels from natural wood.

Formaldehyde emissions in parts per million (PPM)

*Each of these levels are below the CARB II requirement of .05 ppm, the most stringent emission requirement in North America.

EMISSION FACTS

Formaldehyde is a simple chemical compound made of hydrogen, oxygen and carbon, with the formula CH_2O . All organic life forms—bacteria, plants, fish, animals and humans—make formaldehyde at various levels. Formaldehyde does not accumulate in the environment or within people, as metabolic processes quickly break it down in the body and the atmosphere. It has become an essential part of the production of hundreds of beneficial products that are used every day in homes and factories. Formaldehyde-based technologies are an important part of the U.S. economy, as they are used to produce a wide range of materials.

The mark of responsible forestry
