

# Timber Products' SpecialT is one tremendous OSB

# SPECIALT

Timber Products' mill in Corinth, MS manufactures a variety of hardwood plywood panels to meet the needs of the woodworking industry. Our SpecialT hardwood plywood panels use an OSB core made from renewable, small diameter, fast-growing trees, giving you a reliable source of quality panels at a very reasonable price.

- Made from high-density OSB, this is not a standard OSB used to manufacture houses.
- OSB panels are sanded and calibrated to have less thickness variation than veneer core panels.
- All veneer species and cuts can be laminated to an OSB core.
- Edgebanding is available.
- The NAUF core is combined with Timber Products' NAUF glue options for a complete NAUF panel.
- Prefinishing is available at our Corinth facility.
- Available with MDF or tropical cross bands.
- ½" and ¾" thicknesses.
- Excellent screwholding and machinability.
- Great laminating surface.
- Easy, fast finishing.
- Consistent availability.

### OSB Core Specifications\*

| Construction       | MOR  | MOE     | Screw Hold Face | Screw Hold Edge | Weight (lbs) |
|--------------------|------|---------|-----------------|-----------------|--------------|
| OSB Core           | 3530 | 653,000 | 287             | 218             | 85           |
| Particleboard Core | 1885 | 290,100 | 202             | 120             | 100          |
| MDF Core           | 3300 | 340,000 | 225             | 200             | 100          |
| 7-Ply Veneer Core  | 6422 | 619,000 | 265             | 208             | 72           |

\*Information was obtained from ANSI standards and spec sheets supplied by vendors of the components.
